Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-12, 20-38, Group 1, drawn to an electron beam recording means, classified in class 369, subclass 101.

II. Claims 13-19, Group 2, drawn to a transformer means and its structure, classified in class 323, subclass 201.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instant case, invention Group I, claims 1-12 and 20-38, claim a stack of layers where its resistance value can be varied by external electron source. On the other hand, Group 2, claims 13-19 claim the winding structure of a transformer means. To apply electron stream or magnetic field to the layers in Group 1, claims 1-12 and 20-38, the transformer and its detail winding structure as recited in Group 2, claims 13-19 is not required.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that a reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
